

NEW COURSE FOR FALL 2013!

Engineering 39: Energy, Society, & the Environment

*From Public Policy to Your Wallet – Explore Modern Energy
& Its Impact on Sustainability*

Did you know that YOU are part of the global energy conversation?

Learn about the far-reaching implications of modern energy use and what you can do to effect positive change in the five-unit *ENGR 39: Energy, Society, and the Environment*. Ideal for a general audience, this course is an introduction to sustainability and modern energy systems. The course satisfies Foothill GE area III and is transferable to the UC and CSU systems.

You'll examine humanity's efforts to harness and generate energy for industry, work, habitat, and recreation. You'll also participate in discussions about climate change, global population dynamics, energy consumption and economics, energy poverty, and environmental justice. In addition to tours and expert guest speakers, the class provides an overview of how sustainability is being addressed economically, socially, and environmentally both locally and around the world.

Offered in Fall 2013:

Lecture TTh 10:00 – 11:50am
Laboratory Th 12:00 – 2:50pm
CRN: 21808
