# Why have a Framework?

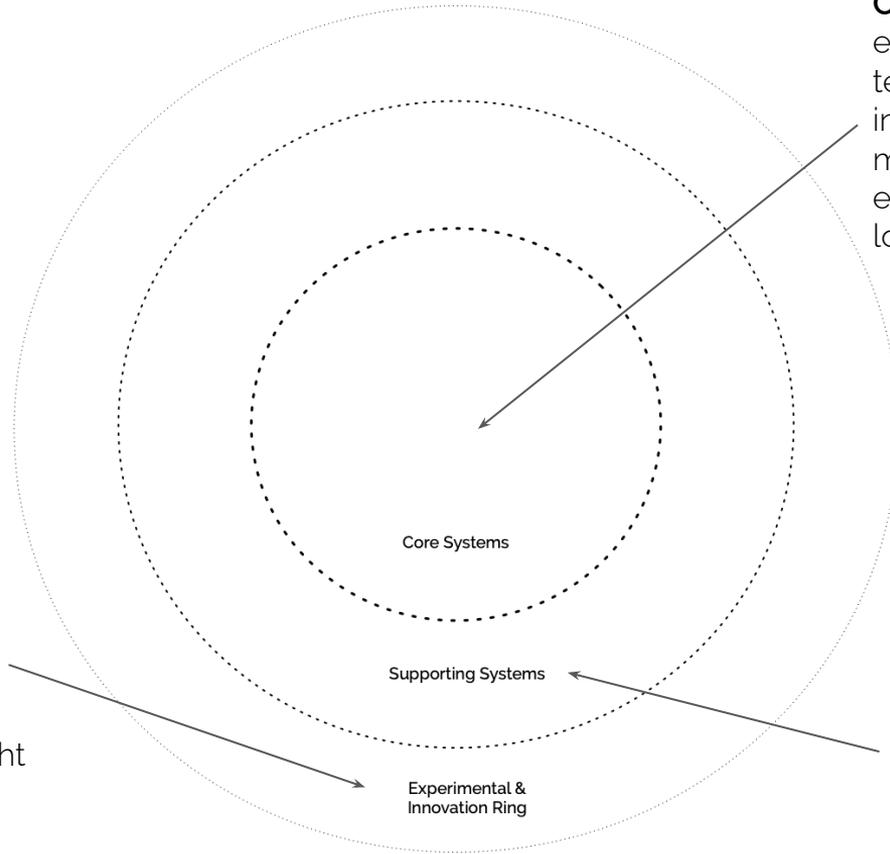

What Educational Institutions Do

People + Resources = Education

People (faculty + staff) are brought together with the deployment of Resources (funding) to educate Students

Systems and Technology need to reflect this

# Framework: Three Rings

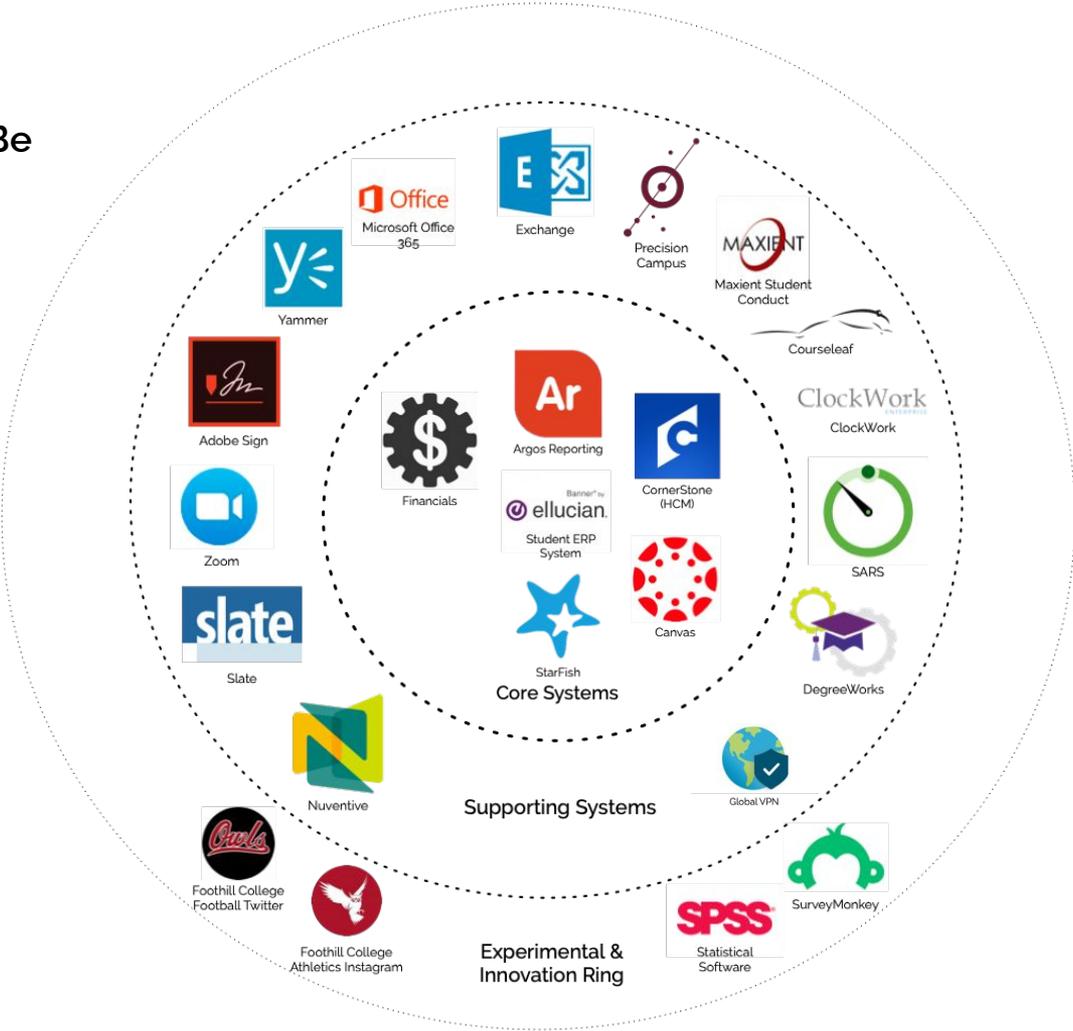

**CORE:** The nexus for the entire educational institutions technology systems that deep integration, meeting the majority of needs of a educational institution on a long-term basis (10-15 years+)

**Experimental & Innovation Ring:** Area for “play” and innovations that will normally happen at an educational institution while providing institutional framing, support, and guidance. Usually not requiring integration and might have a limited life span. Can feed supporting or core systems overtime with adoption.

**Supporting:** Software/systems that support the core systems to may be integrated (as needed) to the core systems, but meet specific needs/applications (especially when the core systems are not best in class to do). Intended to be used for at least five years.
